NICOLINE SØE LARSEN

PORTFOLIO WEBSITE - DESKTOP IMPLEMENTATION BRIEF

Purpose of this document: Guide Figma Make in implementing the existing portfolio design faithfully. This is an implementation task, not a redesign task.

1. Project objective

Build the complete **Desktop version** of Nicoline Søe Larsen's personal portfolio website from the nine attached Figma Design frames. The portfolio is intended primarily for internship applications, potential employers and future professional connections.

The visual design is already complete. Figma Make should translate the supplied designs into a functional website while preserving the original visual direction as closely as possible.

2. Source of truth

The nine attached Figma Design frames are the **primary visual source of truth**. Inspect all nine frames as one connected website before implementing.

Use the existing Figma content, components, layers, images, typography, colours, spacing, dimensions, crops, rotations, hierarchy and compositions. Do not substitute a generic portfolio template or reinterpret the design.

The attached frames are:

- Home - Desktop
- My work - Desktop
- School projects - Desktop
- Online Sikkerhed - Desktop
- Garn og Craft - Desktop
- Creative Production - Desktop
- Søe Knitwear - Desktop
- Personal Skills - Desktop
- Contact - Desktop

3. Scope of this implementation phase

This phase is **Desktop only**. Corresponding manually designed Mobile Figma frames will be supplied in the next phase.

Do not invent, generate or finalise a mobile design now. However, structure the implementation cleanly so the same pages can later be adapted to the supplied Mobile layouts using responsive CSS without rebuilding the website.

The desktop layouts must not be treated as flattened screenshots or rigid single-use canvases. Use appropriate semantic structure and reusable components while maintaining the exact desktop appearance.

4. Visual direction

The portfolio has a warm, personal, tactile and slightly handmade Scandinavian visual identity. It combines clean editorial layouts with creative details inspired by knitting, analogue pinboards, personal photography and handmade materials.

- Warm off-white backgrounds with dark brown typography and footer areas.
- Accent colours include dusty blush/pink, terracotta, muted sage/grey and warm beige.
- A serif wordmark/logo is combined with clean sans-serif typography and occasional handwritten accents.
- Generous whitespace, clear visual hierarchy and editorial composition.
- Personal photography and tactile handmade elements should remain prominent.
- Use the exact fonts and colour values available in the supplied Figma Design rather than approximating them when they are accessible.

Do not add new colours, gradients, decorative graphics, icons, shadows, animations, sections or stylistic effects unless they already exist in the supplied design.

5. Global website structure and navigation

All nine pages belong to one portfolio website. Do not infer page hierarchy from the order in which Figma attachments appear. Use the frame names and the structure below.

Primary structure: Home → My Work → project/content/skills pages → Contact.

- Global header navigation: HOME / MY WORK / CONTACT.
- MY WORK leads to the My Work overview.
- The My Work pinboard provides access to School Projects, Creative Production, Søe Knitwear and Personal Skills.
- School Projects leads to the individual OnlineSikkerhed.dk and Garn og Craft case-study pages.
- Back/return buttons should navigate to the relevant previous level.
- CTA buttons and links should be functional when a destination is available.
- External/social links should use the destinations supplied in the Figma design or later provided by the owner. Do not invent URLs.

6. Reusable elements

Header

Use a reusable header component across the website while preserving the supplied appearance, spacing and positioning. The active navigation state may reflect the current top-level section where appropriate, but do not introduce a new visual treatment that is absent from the design.

Footer

Use a reusable footer component. Preserve the dark brown design, logo/wordmark, handwritten 'Made by Nicoline Søe Larsen' detail, navigation, contact information and social areas exactly as represented in Figma.

Buttons and links

Preserve existing button shapes, borders, typography, arrow treatments and spacing. Hover states should be subtle and should not materially change the visual design.

7. Page-specific requirements

01 - Home

- Header with logo/wordmark and HOME / MY WORK / CONTACT navigation.
- Hero flat-lay photograph and centred outlined 'LEARN MORE' CTA as designed.
- Personal introduction section with portrait and the existing Nicoline Søe Larsen copy.
- 'MY INNER CREATIVE CHILD' section with childhood photograph and 'VIEW MY WORK' CTA.
- Dark brown footer matching the supplied design.

02 - My Work

- Preserve the heading 'Things I'm proud of' and the supporting call to explore the work.
- The tactile pinboard is a central custom composition and must not be replaced by a generic project grid.
- Four project cards: School Projects, Creative Production, Søe Knitwear and Personal Skills.
- Cards must remain functional/clickable and link to their respective pages.
- Preserve decorative knitting swatches, photographs, flowers, notes, pins, palette elements, rotations, scale and layering.

03 - School Projects

- Preserve the back/return control.
- Dusty-pink 'School Projects' banner/hero.
- Project previews for OnlineSikkerhed.dk and Garn og Craft with their supplied imagery, copy and links.

04 - OnlineSikkerhed.dk

- Preserve title, school-project context, dates, hero laptop imagery and website CTA.
- Maintain the goal/challenge content and the role/tools/focus information presentation.
- Preserve visual-direction content, colour palette, typography and logo-design presentation.
- Do not simplify the case study into a generic project template if doing so changes the supplied composition.

05 - Garn og Craft

- Preserve the case-study layout and visual hierarchy from Figma.
- Maintain Role: Visual Style & Logo Design; Tools: Figma | Procreate | Adobe Illustrator; Focus: Branding | UI | Accessibility.
- Preserve the supplied palette and typography presentation, including FAT FRANK, BRANDON GROTESQUE and Poppins references.
- Preserve the three logo variants and their presentation.

06 - Creative Production

- Preserve the terracotta visual identity and 'Digital content & Brand communication' section.
- Maintain the 'From idea to final product' flow and the existing content examples/statistics.
- Preserve the Nicoline Søe and Børkop Cykler content sections and the dimensions/composition of video placeholders or media areas.
- Actual video files will be supplied in a later implementation phase. Do not invent replacement video content.

07 - Søe Knitwear

- Preserve the muted sage visual identity and 'Knitting my way through content' heading.
- Maintain the editorial/masonry-style image composition rather than converting it to a generic equal-size grid.
- Preserve the large yarn image and 'VISIT @SOEKNITWEAR' CTA.

08 - Personal Skills

- Preserve the warm beige visual identity and 'My Skill-library' concept.
- The illustrated bookshelves are intentional custom compositions and must not be replaced by standard cards, lists or icons.
- Sections include Visual Design, Creative Thinking, Creative Production and Toolbox.
- The shelves are built from native Figma shapes and text. Recreate them with HTML/CSS where practical rather than flattening the entire shelf into one image.
- Preserve book dimensions, labels, typography, rotations, spacing and overall shelf composition.
- Preserve the 'REACH OUT TO ME' CTA.

09 - Contact

- Preserve the 'You're still here?' heading, supporting introduction and arched portrait treatment.
- Display the supplied contact information exactly as designed.
- No contact form is required unless one exists in the supplied Figma design.

8. Complex visual elements

My Work pinboard

Treat the pinboard as an intentionally art-directed composition. Use a positioned container and preserve the relative position, scale, rotation and z-order of its elements. Coloured project cards and text should remain functional HTML/CSS elements where practical. Existing image-based decorative assets should remain image assets. Do not flatten the entire board into a single screenshot and do not replace it with a standard card grid.

Personal Skills shelves

Treat the shelves as a designed visual system, not ordinary content cards. Recreate native shapes and text as web elements where practical and preserve the original composition closely.

Photography and image crops

Use the images already contained in the Figma frames. Preserve their crop, aspect ratio, positioning and intended prominence. Do not replace them with stock imagery or AI-generated alternatives.

9. Content rules

- Use the exact final text supplied in the Figma designs.
- Do not rewrite, shorten, summarise or 'improve' portfolio copy.
- Do not add placeholder copy where final copy already exists.
- Do not invent project facts, statistics, URLs, tools, roles or descriptions.
- Preserve intentional capitalization and labels from the final Figma design.

10. Interaction and implementation behaviour

- Navigation and internal page links must work.
- Back/return controls must work.
- Clickable project cards and CTAs should use appropriate links.
- Keep interactions understated. No parallax, large entrance animations or unnecessary motion.
- Avoid horizontal overflow and layout breakage.
- Use reusable components and maintainable structure where doing so does not alter the visual design.
- Do not create separate duplicate desktop/mobile websites. The later Mobile phase should become responsive states of these same pages.

11. Assets and later phases

Images already present inside the attached Figma Design frames should be used from the design context wherever possible. There is no requirement in this phase to replace those images with separately uploaded files.

The project owner has additional original image assets and 10 video files. These will be supplied later only where required. The intended workflow is:

- Phase 1: Implement the complete nine-page Desktop website from the attached Desktop Figma frames.
- Phase 2: Supply nine corresponding Mobile Figma frames and extend the existing implementation responsively without redesigning Desktop.
- Phase 3: Supply the final video files and connect them to the existing Creative Production media areas.
- Phase 4: Perform visual QA and targeted corrections against the source designs.

12. Priority order

1. Fidelity to the supplied Figma Desktop designs.

2. Correct website structure and page relationships.

3. Correct existing content and imagery.

4. Typography, colours, spacing, dimensions, image crops and visual hierarchy.

5. Functional navigation, links and interactions.

6. Clean implementation that can later be extended to the supplied Mobile designs.

When uncertain, choose the implementation that changes the original Figma design the least.

13. Definition of success

The first implementation is successful when the nine-page Desktop website looks recognisably like the supplied Figma portfolio rather than a generated template; preserves its distinctive pinboard, shelves, editorial layouts, photography and visual identity; has working navigation and page relationships; and is structurally ready to receive the manually designed Mobile layouts in the next phase.
